## Introduction

### What does it do?

This is a new shop extension with new features in the presentation of products and the management of the orders. This is a small list of the features now available:

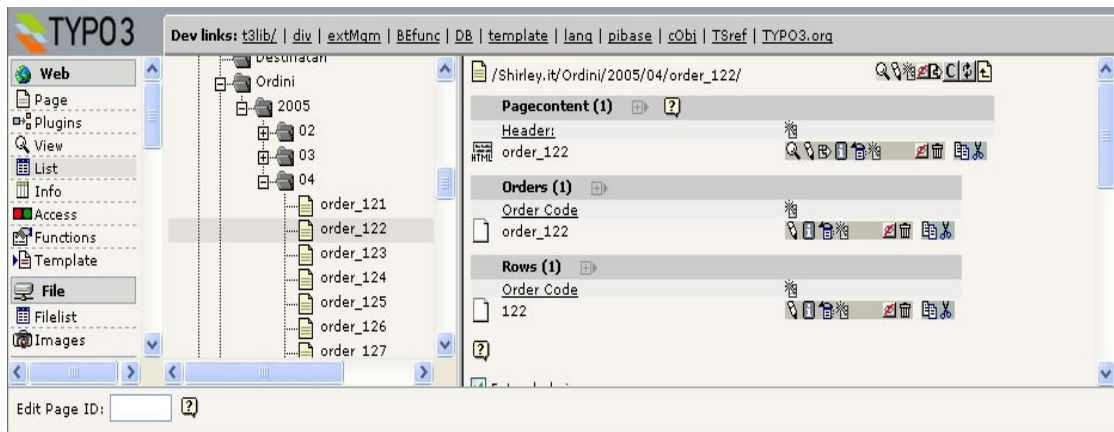

- management of offer price e discount
- management of color and size options
- advanced management of orders
- users registration
- static address and page title for the products
- MULTI-LANGUAGE SUPPORTED
- Order tracking
- ...

Besides the shop provides a locallang file with the translation of all the labels in the template. So, if you want a new language, you have to modify only the locallang.php file and not the template.

This shop also provides two native payment gateways for PayPal and for Banca Sella (the last with one-time passwords).

## Users manual

You have to insert the plugin "Advanced Shop System" like a normal page content and then you have to specify a type of visualization (in the "VISUALIZATION CODE" field).

There are 4 possibilities:

- LIST: to show the list of the products. You can specify a different starting point than the actual page and a recursivity level.
- OFFER: to show only the offers. You can specify a different starting point than the actual page and a recursivity level.
- SEARCH: to show the search form. You can specify a different starting point than the actual page and a recursivity level.
- BASKET: the page where there's the basket.

To insert a product you can follow the link "Create new record" and select "Products". There are a lot of fields:

- Itemnumber: the code of the product
- Title: the name of the product
- Page title: the title of the page in the detail page of the product. If empty than the "Title" of the product will become the page title. This is true only if you have configured it the TypoScript this functionality.
- Summary: a short description of the product.

- Description: a complete description of the product.
- Image: the product image.
- Price: the product price. The point (.) is the decimal separator. Warning: if you want to insert the value '155.20' you must write '155.2', if you don't follow this tip TYPO3 will generate a warning message.
- Price no tax: at the moment not enabled.
- In stock: at the moment not enabled.
- Category: the category of the product. At the moment this functionality is not complete.
- www: at the moment not enabled.
- Ordered: at the moment not enabled.
- Weight: at the moment not enabled.
- Volume: at the moment not enabled.
- Correlated Accessories: at the moment not enabled.
- Offer price: the new price. If this field is filled, the new price of the product is this and the discount percentage will be calculated automatically.
- Offer price no tax: at the moment not enabled.
- Discount: the percentage of discount. If this field is filled, the offer price will be calculated automatically. To be used only if offer price is empty.
- Sizes: the sizes of the product. If more than one the values need to be separated by the special character "!"
- Colors: as for sizes.
- Correlated products: the products that are correlated with this. You can select them from the list of the existing products.

## Administration

You have to insert the plugin "Advanced Shop System" like a normal page content and then you have to specify a type of visualization (in the "VISUALIZATION CODE").

There are 4 possibilities:

- LIST: to show the list of the products. You can specify a different starting point than the actual page and a recursivity level.
- OFFER: to show only the offers. You can specify a different starting point than the actual page and a recursivity level.
- SEARCH: to show the search form. You can specify a different starting point than the actual page and a recursivity level.
- BASKET: the page where there's the basket.

Then you have to create 2 new system folders: one where the orders will be stored and one to store the delivery addresses. When a new user buys a product then it will be saved in the basket page like a new `tt_address` record. A mail is sent to the user with his login (the email address) and password that will be used to fill in the fields automatically with the stored information when he is making a new order.

The orders are stored in the above said sys-folder like a new page and with new records for the order and for every single product bought.

**If you upgrade from v. 1.x, please read the file `upgrade.txt` in the extension root.**

## Configuration

### Constants

# Template file

```
plugin.tx_extendedshop_pi1.file.templateFile = EXT:extendedshop/pi1/shop.html
```

# CSS file

```
plugin.tx_extendedshop_pi1.file.cssFile = EXT:extendedshop/pi1/styleShop.css
```

# Number of decimals

```
plugin.tx_extendedshop_pi1.priceDec = 2
```

```

# Decimal separator
plugin.tx_extendedshop_pi1.priceDecPoint = ,
# Thousand separator
plugin.tx_extendedshop_pi1.priceThousandPoint = .
# Set to 1 if you want to open a popup when the user clicks over the image in the list mode. If 0 the image is a link to the
detail of the product
plugin.tx_extendedshop_pi1.clickEnlarge_list = 0
# Set to 1 if you want to open a popup when the user clicks over the image in the detail mode.
plugin.tx_extendedshop_pi1.clickEnlarge = 1

```

## Setup

```
includeLibs.tx_extendedshop_pi1 = EXT:extendedshop/pi1/class.tx_extendedshop_pi1.php
```

```

plugin.tx_extendedshop_pi1= USER
plugin.tx_extendedshop_pi1.userFunc = tx_extendedshop_pi1->main
plugin.tx_extendedshop_pi1{

```

```

# The main function
userFunc = tx_extendedshop_pi1->main_shop

```

}

## EXAMPLE shipping config:
plugin.tx_extendedshop_pi1.shipping {
    10.title = ITALIA
    10.priceTax = 8,00
# 10.priceNoTax =

    20.title = FRANCIA
    20.priceTax = 10,00
# 20.priceNoTax =

```

}

# This shows the product title in the page title

```
config.titleTagFunction = tx_extendedshop_pi1->product_title
```

## Known problems

The field visualization code will be deleted in the future and substituted with a more standard one.

## To-Do list

In the next new versions the following features will be introduced:

- Management of VAT
- Management of stock products
- Management of products volume and weight
- Management of more than one photo in the detail page and the association photo-color
- Correlated accessories
- Favourite products list
- Gift remainder
- Invoice generation in a pdf file
- Products list exportation for froogle

If you want to collaborate or just give some idea please contact us: [info@webformat.com](mailto:info@webformat.com)

## Changelog

0.1.0

- Initial release

0.2.0

- MULTILANGUAGE SUPPORTED
- Constants Editor supported

0.2.1

- Bug fixing

1.0.0

- Bug fixing
- STABLE RELEASE
- Lithuanian translation

1.1.0

- German translation

1.2.0

- TYPO3 4.0 compatibility

1.2.1

- Finnish translation

1.2.2

- Email confirm bug fixed

1.2.3

- Bug fixing

1.2.4

- PayPal interaction updated

2.0.0

- Customers as FE-users
- Order tracking
- BE orders management module
- Advanced search
- UI improvements
- Authorize.net gateway integrated
- Czech translation

## Thanks to

We'd like to thank Arunas Barbsys for his Lithuanian translation of the shop labels.

We'd like to thank Daniel Raßbach for his German translation of the shop labels.

We'd like to thank Tapio Markula for his Finnish translation of the shop labels.

We'd like to thank Nancy from Shield Web Design for bug fixing in PayPal interaction.

We'd like to thank Jiri Chaloupka for his Czech translation of the shop labels.
